GameMatch

App Concept and Screen Flow

SWYNEX Internship — Task 1

1. App Concept

GameMatch is a simple utility app that helps gamers decide what to play. The app asks users about their gaming platform, available time, preferred playstyle, and desired experience. It then provides a personalized game or genre recommendation with a match percentage.

2. Target User

Primary users: Casual and regular gamers who have difficulty deciding which game to play.

User problem: There are thousands of games across many genres and platforms, making it difficult to find a game that fits a user's preferences, available time, and desired experience.

Solution: GameMatch turns these preferences into a quick personalized recommendation.

3. Primary Screens

Screen	Purpose
1. Welcome	Introduces GameMatch and starts the recommendation quiz.
2. Gaming Preferences	Collects platform and available gaming time.
3. Playstyle	Collects preferred experiences such as action, story, exploration, strategy, and racing.
4. Your Match	Shows the best-matching genre and ranked game recommendations.
5. Game Details	Shows the selected game's genre, platforms, difficulty, length, and reasons it matches.
6. Saved Games	Lets users keep recommended games for later.

4. Navigation Flow

Welcome → Gaming Preferences → Playstyle → Your Match → Game Details

From Game Details, the user can choose **Save Game** to add the title to Saved Games, or **Try Another** to return to the recommendation flow. Saved Games can be accessed from the bottom navigation.

5. Accessibility & Design Choices

• High-contrast dark interface with bright accent controls.

• Large, readable labels and clear button text.

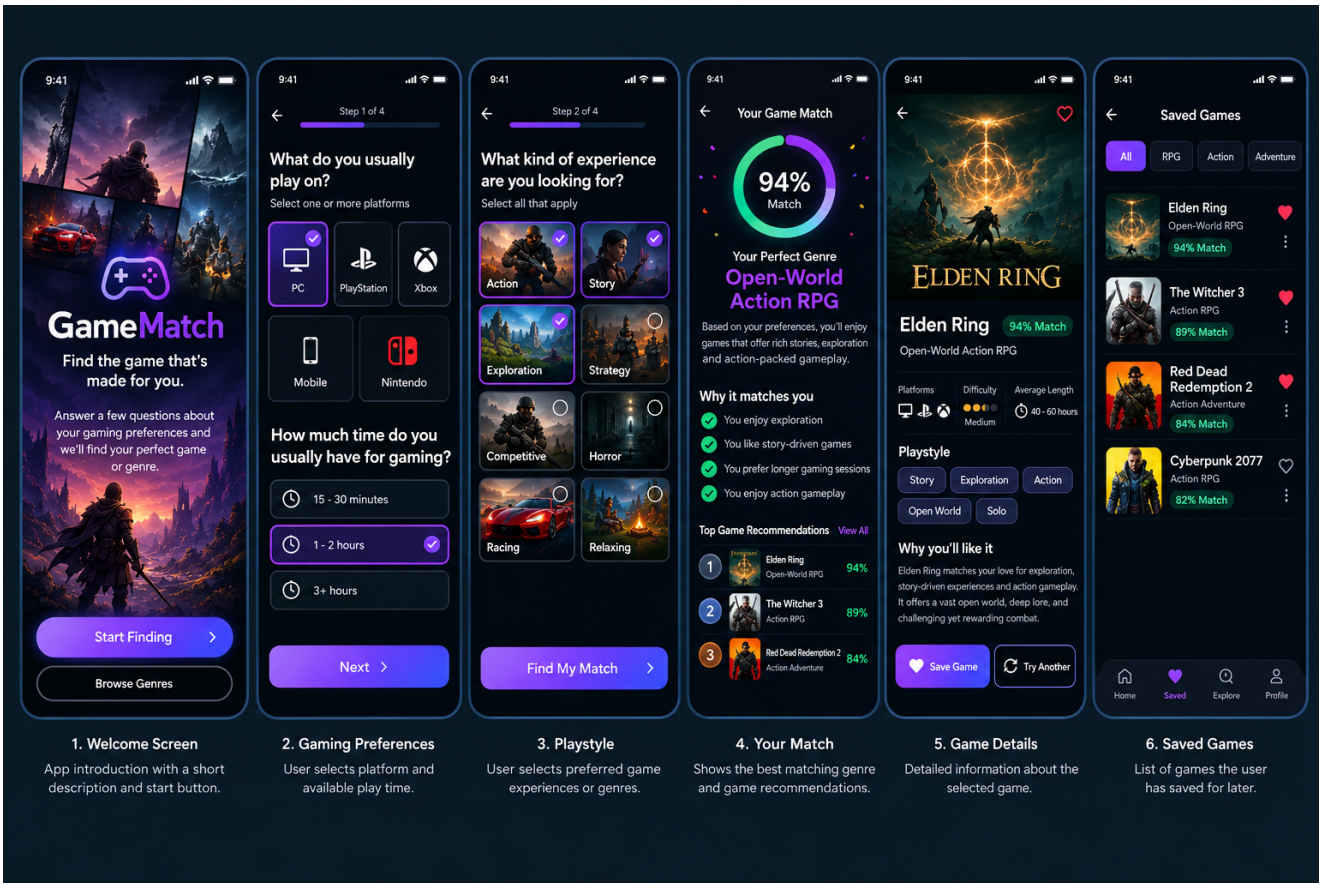

• Consistent navigation and screen structure.

• Selection states are visually distinct.

• Icons are paired with text where useful rather than being the only indicator.

• The quiz uses a small number of simple choices to reduce cognitive load.

6. UI Mockup

Mockup includes six primary screens: Welcome, Gaming Preferences, Playstyle, Your Match, Game Details, and Saved Games.
